RYAN ARTHUR

Product Designer · Cincinnati, OH

(513) 504-5819
ryan@ryanarthurdigital.com
https://ryanarthurdigital.com

Handcrafted digital products, story-mapped and built in the browser by small, mighty teams.

Product designer and front-end developer who takes B2B SaaS, enterprise, and 0-to-1 products from story-mapped discovery to production code.

Learned the practice at Launch Scout and refined it at Configure. Now runs it at Ryan Arthur Digital with AI-assisted pipelines, heading toward design-technologist work.

EXPERIENCE

Product Designer & Founder

Ryan Arthur Digital · 2022 – Present

- Led discovery for a private-pay pilot, a new line of business for AddnAide's home-healthcare platform, from kickoff to a clickable product in 3 weeks, after redesigning its time-entry and compliance workflows.
- Landed at ~235 hours of 240 contracted: cut 128 user stories to 49 must-haves by success metrics set with the client in discovery, then estimated each from the code.
- Built 17 Phoenix LiveView screens in 5 days from 27 generated HTML wireframes (9 rebuilds in 8 days). Wireframes, estimates, and tests all came from the same user story.
- Had a draft ready each morning from a Claude Code pipeline of 7 AI agents and skills linked to the project board via MCP. People made every decision and sent all client work.
- Won a NASA Tournament Lab challenge with a ground control station letting one operator control multiple autonomous aircraft.

UX Engineer

Configure, Inc. · 2023 – 2025

Hired full-time after a year as a Ryan Arthur Digital client. Sole designer for Configure 2.0's construction-procurement marketplace.

- Replaced manual bid leveling with Bid Day: Basis of Design setup, PDF quote import, multi-vendor comparison, and exportable selections, designed and shipped in Blazor and Razor.
- Took Configure Clipboards from a contract-year sprint demo to a shipped submittals workflow where stakeholders open a shared Clipboard by short code, suggest swaps, and send to order.
- Built one design system across the 8-app Configure suite (2020 to 2025): about 450 Blazor components and ~44,000 lines of hand-authored CSS and SCSS, all in code.

UX Designer

Launch Scout · 2012 – 2022

- Led design for a KLH Engineers offshoot from design sprint to proof of concept (Atlas), which secured over $1.5M in seed funding and Autodesk buy-in.
- Designed PRESTO, replacing paper work orders across 3 facilities in 3 states with no parallel run. The COO called it "functional software we could test."
- Shipped front ends for Omnicare's real-time pricing platform and the open-source BlockScout explorer.

EDUCATION

BSA Visual Communication

University of Cincinnati, DAAP

SKILLS

DESIGN

- Figma
- Adobe Creative Suite
- User research
- Stakeholder interviews
- Usability testing (PostHog)
- Prototyping
- Wireframing
- User story mapping
- Design sprints
- Information architecture
- Design systems
- Design tokens
- Mobile-first design

CODE

- HTML
- CSS / SCSS
- JavaScript / TypeScript
- Elixir / Phoenix LiveView
- Ruby / Rails
- Blazor / Razor
- Next.js / React
- Web Components
- Accessibility (WCAG, ARIA)
- Git

AI AND AUTOMATION

- Claude Code
- Agent & skill authoring
- MCP integrations
- AI code & design review

METHODOLOGY

- Jobs-to-Be-Done
- Agile
